

Lab Assignment

- Finish the **customer login** and population of **customer table**.
- Customize the initialize () method in class such a way that login jpanel screen shows either customer or supplier depends on role of user logging in.
- Add regex validation for password of both supplier and customer such that password should contain **One upper case letter, one number and One special character which is #**.

Submission Requirements

- Create .gitignore file for your team repo.
- All the work should be submitted in your team repo on bitbucket. (Your team repo name should contain your team name)
- All team members should have their own branch. (name as your first name)
- Students must show pull requests raised for their code changes contribution. A student who has not raised any pull request for the assignment gets 0 points for the whole assignment.
- Final codes should be on master branch. (pushing changes directly to master branch will cause a lot of conflicts)
- Multiple commits are required.
